INTRODUCTION

This is the site which is working for needy people or hungry people. No Food Waste is a mission to end food waste and hunger to make the “Hunger Free India”. We recover surplus food from weddings, parties and functions and donate it to needy and hungry people. Dedicated Food Recovery Units including Helpline Number, Food Recovery Vehicles, Vessels, Mobile Application and Volunteers are involved for effective process execution.

Children are the future of every nation. The vision and mission of Helping Hand this organization is towards our goal of overcoming poverty, and ensuring a life of dignity and security for the marginalized populations. In association with local Mandirs, Masjids, Gurudwaras, churches and NGOs, Our team serves Food for poor children.

NEED OF THIS PROJECT

According to a joint study conducted by ASSOCHAM and EY, India is home to the largest number of malnourished children in the world. It was found that close 40% of Indian children were reportedly undernourished in the year 2015. "Over the decade (2005-15), there has been an overall reduction in the infant mortality rate and under-five mortality rate in India, yet the country is housing about 50 percent of undernourished children of the world," said the joint study by Assocham and EY. Close to 37% of Indian kids under five years of age are underweight while 39% are stunted, 21% have low weight for their height and 8% are acutely malnourished. The prevalence of underweight children was higher in rural India at 38% as compared to urban India (29%). As per the study, only 10% of children ageing 6-23 months were reported to receive nutritionally adequate diet. While the highest number of underweight kids, under five years of age, were found in Jharkhand (42%), while UP reported the highest number of kids with stunting. India continues to consume non-nutritious, non-balanced food either in the form of under nutrition, over nutrition or micronutrient deficiencies, according to the report.

"The policies need to focus on reducing health and social inequities within populations, raising educational attainment and providing WASH facilities as well as secured jobs to ensure access to services. Programmes and policies that aim to address this nutrition burden present a double-win situation," said the report in its recommendations.

CHILDREN DIE DUE TO HUNGER:-

190.7 million people are undernourished—meaning that over 14.5 percent of India's whole population is suffering from hunger. In fact, **3,000 children** throughout India die of malnutrition every day

WORKING OF THIS PROJECT

This project works on the supply chain management

Supply chain management: - supply-chain management (SCM), the management of the flow of goods and services, involves the movement and storage of raw materials, of work in process, and of finished goods from point of origin to point of consumption. Interconnected or interlinked networks, channels and node businesses combine in the provision of products and services required by end customers in a supply chain.

First of all, we will go inside the site. then we will see about the site neki (an initiative to end hunger) then there is two main tab one is requirement and second is donation tab and if we want donate food then we have to go inside the donation tab then we have to fill the require information and after then the information will go to the admin then admin send food to the address to the poor needy people through his/her prisoner.

And if someone wants food or someone around us should eat food. then we will click on the requirement tab then we will open the tab and fill the required information and then the information will go to the administrator, then admin will send food to needy poor people by his/him worker.

CONCLUSION

By doing this project we were able to bring a new system for poor people in our country. With the advent of technology and Internet in our day to day life. The importance of food does not need to be discussed more, it is an illogical disorder in our society that where food is not available on one side, on the other hand, large quantities of food is wasted in hotels and our homes. and this is good initiative to maintain it.
